ABOUT ME

Junior Data Engineer with nearly 3 years of experience in data, including over 1 year working with data engineering in production environments. I develop ETL/ELT pipelines using Python, SQL, PySpark, and Databricks (Delta Lake) within the Azure ecosystem, as well as integration APIs with FastAPI. I have a solid background in data analytics and Business Intelligence (Power BI, DAX), which helps me understand business requirements and deliver reliable data to downstream consumers. Currently pursuing a postgraduate degree in Data Engineering, with a focus on further developing my skills in pipeline architecture, data quality, and orchestration.

TECHNICAL SKILLS

- Power BI
- DAX
- Power Query
- Advanced Excel
- ETL/ELT
- Databricks
- Delta Lake
- Azure
- SQL
- PySpark
- n8n Workflow Automation
- Pandas
- Python
- Docker
- Git
- Linux
- Apache Spark
- FastApi
- APIs
- Data Pipelines
- IA

PROFESSIONAL EXPERIENCE

Up-ISP

Junior Data Engineer — **July 2025 – Present**

- Build data processing and transformation solutions using Python, SQL, Apache Spark, PySpark, Databricks, and Delta Lake, focusing on reliability, data quality, and performance.
- Develop and maintain ETL/ELT pipelines in Databricks (PySpark, SQL, and Delta Lake) on Azure, ingesting data from 5 operational sources and processing approximately 150,000 records daily in production.
- Developed 6 APIs using FastAPI to integrate internal systems into data ingestion workflows, replacing manual data collection and reducing data availability time from hours to minutes.
- Implemented data validation and standardization routines using Pandas and PySpark, including handling null values, duplicates, and inconsistent formats, improving the reliability of data delivered to business teams.
- Collaborate with technical teams and business stakeholders to translate operational requirements into analysis-ready tables used in operational monitoring dashboards.

Junior Data Analyst — **July 2024 - July 2025**

- Developed 8 Power BI dashboards using Power Query, DAX, and data modeling to monitor network performance and support tickets, helping the infrastructure team prioritize maintenance activities and identify network instability.
- Automated data extraction from 4 sources, including REST APIs, databases, and internal systems, using Python, SQL, and Requests, replacing manual data collection and reducing report preparation time from hours to minutes.
- Built 2 workflow automations using n8n for alert notifications and operational processes. Used Git, including branches, merges, and pull requests, for version control and team collaboration.
- Processed and standardized data in CSV, Excel, JSON, and Parquet formats using Python and Pandas, creating a unified and reliable data foundation for reporting.

Fimm Brasil

Data Analytics Intern — **June 2023 - June 2024**

- Developed 4 Power BI dashboards using Power Query, DAX, and data modeling to monitor CAGECE operational KPIs, supporting management teams in day-to-day decision-making.
- Extracted and processed data from internal systems using Python, SQL Server, and Excel, including web scraping scripts that replaced manual information collection.
- Contributed to the automation of administrative processes, including résumé screening and email analysis, reducing manual workload for the Human Resources team.
