

João Breno

Junior Data Analyst

About Me

I am João Breno, a Junior Data Analyst with hands-on experience in corporate environments, continuously working with operational data, metrics, dashboards, and system analysis.

My work goes beyond analyzing existing charts. I operate close to the source of the problem, understanding the client's context, structuring information, documenting incidents, and transforming these records into organized, reusable data that supports future analysis and decision-making.

I have prior experience as a Data Analysis Intern, where I developed dashboards and reports for management support. Currently, I work as a Systems Analyst in a computer networking company, analyzing monitoring data using Zabbix and Grafana, identifying patterns, tracking indicators, and acting as a bridge between clients, operations, and technical teams.

In practice, I also work within routines aligned with the Scrum methodology, including demand organization, prioritization, incident tracking, and continuous improvement — even when not formally defined as a requirement.

I have a solid foundation in Excel, data analysis, data visualization, technical documentation, and stakeholder communication. Tools such as SQL and Python are part of my technical skill set and are applied whenever they add value to the business context.

My focus is clear: turning data and operational information into clarity, predictability, and decision support, helping organizations operate more efficiently and in a truly data-driven way.

PROFESSIONAL EXPERIENCE

Systems Analyst / Data Analyst

UP ISP — Service company for Internet Service Providers
2024 – Present | Fortaleza – CE

Working in a computer networking environment with a focus on operational data analysis, system monitoring, and decision support.

Main responsibilities:

- Data analysis and metrics analysis of network systems using Zabbix and Grafana, monitoring indicators, alerts, and incidents.
- Interpretation of charts and dashboards to identify patterns, recurring failures, and anomalous behaviors.
- Direct involvement in one-on-one customer support, understanding the problem at its source, collecting relevant information, and translating technical issues into structured data.
- Constant communication with network analysts, acting as a bridge between the client, operations, and the technical area.

Technologies and tools:

Zabbix • Grafana • Git • Scrum * SQL * PYTHON

Data Analysis Intern

FIMM Brasil — Company providing services to CAGECE.

2023 – 2024 | Fortaleza – CE

Role focused on analyzing, organizing, and visualizing operational data, directly supporting managers and leaders in strategic decision-making.

Main responsibilities:

- Creation and maintenance of Excel databases for controlling and organizing operational information.
- Development of dashboards in Power BI for monitoring indicators and performance.
- Executing SQL queries to extract and consolidate data used in reports and analyses.

Technologies and tools: Excel • Power BI • SQL • Python
