ABOUT ME

Junior Data Analyst with experience in indicator analysis, monitoring, and data-driven decision-making support. I work in the computer networking segment, transforming operational data into strategic insights to support clients, operations, and technical teams. I have an analytical and hands-on profile focused on pattern identification, continuous improvement, and process optimization, with experience in agile environments and direct interaction with clients and operational teams. Dedicated professional with a strong willingness to serve and continuously learn.

SKILLS

- Power BI	- Excel	- Apache Spark
- DAX	- SQL	- Databricks
- Power Query	- Microsoft Fabric	- Data Warehouse
- M Language	- n8n Automations	- Power Automate
- Data Storytelling	- Apache Hop	- Linux
- Machine Learning	- Python	- Statistics for Data Analysis
	- KPIS	- Power Apps
		- IA

PROFESSIONAL EXPERIENCE

Up-ISP

Junior Data Analyst

Julho 2024 - present

- Worked on data analysis, monitoring, and Business Intelligence projects in a computer networking company, providing analytical support for internet providers and network infrastructure operations.
- Responsible for monitoring data analysis using Zabbix, Grafana, and Power BI, developing dashboards, indicators, and visualizations for performance tracking, incident analysis, and decision-making support.
- Hands-on experience with Power BI, Power Query, DAX, M Language, data modeling, storytelling, and KPI development focused on operational analysis and pattern identification in network environments.
- Worked with SQL, Python, and Microsoft Fabric for data extraction, processing, automation, and analysis, including automated information collection and operational reporting processes.
- Developed automations using n8n to optimize internal processes, including email reading, resume processing, automatic notifications, and operational workflow integrations.
- Also acted as a bridge between clients, operations, and technical teams, being responsible for dashboard presentations, alert analysis, technical incident explanations, and support in interpreting network indicators and metrics.
- Experience with Scrum-based routines, including demand organization and prioritization, incident tracking, continuous improvement, and agile workflows using Tiflux.

Fimm Brasil

Jun 2023 - Jun 2024

Data Analyst Intern

- Worked on data analysis and Business Intelligence projects for a service provider company of the Ceará State Water and Sewage Company (CAGECE), participating in the development of analyses, automations, and dashboards focused on operational and managerial support.
- Responsible for data collection, processing, and analysis using Python, SQL, Excel, and Power BI. Performed web scraping processes on internal company systems for data extraction and structuring used in reports and analyses.
- Developed dashboards and indicators in Power BI using Power Query, DAX, and data modeling to support metric tracking and decision-making.
- Participated in SQL Server projects involving queries, data manipulation, and analysis in more complex scenarios, working in multidisciplinary teams divided into analysis, data processing, and dashboard development.
- Also contributed to the development of internal automations for other company sectors, including resume processing, email analysis, and administrative process optimization.
